```

Interview Journey

- Stand out – every encounter is an opportunity
  - Ask questions publicly – build community
  - Contribute – network
  - **Presentations –** make it your finest moment
- Daily algorithm – project development is not enough

Before interview

- Research company – tech stack and what they do
- Research interviewers – journey, interests and culture
- Ice breaker – make sure you set the stage

Onboarding

———

- Before day 1 – engineering journal (Notion)
- Be aware
    - Take notes (journal)
    - Where can you contribute? – consider everything
- Ask questions – about everything and anything
    - Great way to build relationships

Looking back...

___

What I would do different if I could start over?

- Organize – work smarter (Notion helps)
- Drive to drift – cruising is slower
- Teach to learn – locks-in understanding
- Study large codebases and other people's code

Remember, programming is a hypersocial endeavor and time is a fabricated thing -> you are it's creator!
